STATEMENT OF SUPPORT FOR CLAIM AMENDMENTS PURSUANT TO 37 C.F.R. §1.121(b)(2)(iii)

ASSISTANT COMMISSIONER FOR PATENTS WASHINGTON, D.C. 20231

SIR:

In accordance with the requirements of 37 C.F.R. §1.121(b)(2)(iii), enclosed herewith is an explanation of the support in the disclosure of the patent for the claim amendments including new Claims 12-47.

Independent Claim 12 generally corresponds to the embodiment illustrated in Figure 23 and described in the specification at column 25, lines 1-9. The features regarding the power supply within the printer module and the inputs are supported by Figure 23 and its description at column 25, lines 1-9. The description of Figure 23 at the top of column 25 describes the system of Figure 3 as being based on the system of Figure 1 with the difference being in the electric power supply section, etc. Thus, the features of the other embodiments including the embodiment of Figure 1 are applicable to the added claims.

Regarding the feature of Claim 12 including a first frame and a second frame different from the first frame, these features are supported by the scanner module and the printer modules having independent frames, as recited at column 4, lines 38 and 39, and lines 51 and 52. The printer module corresponds to reference numeral 200, the scanner module corresponds to reference number 100, and the user interface corresponds to the consolel 303 having a key input section 303A and a bit map display section 303B illustrated in Figure 13 and described in the specification at column 19, lines 31-33.

The user interface being incorporated in the scanner module or the printer module is supported in the specification at column 4, lines 63-65 and column 5, lines 37-41, for example.

The limitation of Claim 14 displaying a state of both the printer module and the scanner module is supported at column 20, lines 14-16 and column 21, lines 43-49, for example.

The limitations of Claim 15 are supported by Figures 23 and 1, for example, which illustrate the use of at least one cable and also, column 5, lines 31-33 which recite that a number of cables used for connection between the basic modules be reduced as much as possible. Being reduced as much as possible supports the "minimum number of cables." A minimum number of cables connecting the elements will typically be one as a plurality of wires, etc. can be placed into a single cable.

Claim 16 is clearly supported by Figures 1 and 23.

Claim 17 is supported by column 19, line 33.

Claim 18 is supported by column 4, lines 39 and 40, and lines 51 and 52.

Claim 19 is supported by the last line of column 4.

Claim 20 is supported by column 13, lines 35-38, for example. See also generally column 6, lines 56-59.

Claim 21 is generally supported by column 4, line 63-65.

Added Claims 23-29 correspond to the limitations in Claims 15-19, and are supported for similar reasons as Claim 15-19 are supported.

Claim 28 is supported by column 19, lines 31 and 32.

Claim 29 is supported for similar reasons as Claim 20 is supported.

Added Claims 30-47 correspond to Claims 12-29 written using means-plus-function format and are intended to be interpreted under 35 U.S.C.§112, sixth paragraph. Support for these means-plus-function claims is found in the specification and drawings at least where the corresponding Claims 12-29 are supported. There may be additional support in the specification for these and all added claims.

Respectfully submitted,

OBLON, SPIVAK, McCLELLAND,

ween Waler
